Letter of Welcome from Director

There always seems to be separation between people that have and people that have not. This has been the case throughout history. The African American pilgrimage in America has been one of constant struggle and suffering. The have not's often have such limited resources that they can not compete with those that have. In today's terms the key is Information and Technology. Those that have and use technology have a clear and decisive advantage. There seemingly has always been a great divide. We have been separated by racism, the wilderness of miss education, poverty and finally the "Digital Divide".

Whatever situation or circumstances that have hindered us from reaching our potential, there must always be a bridge to help us beat the odds that were stacked against us. Today's barriers are no different from yesterday's. Through the Technology Resource Center, we expect to achieve the following goals:

- Help people find their potential
- Help people believe in themselves
- Help people make a connection with Technology
- Help people maximize their use of technology

As a by product, the Center will provide a safe place for fellowship and building a sense of community. Through this center we are determined to help to bridge the "digital divide". We will bridge that divide through faith, encouragement, technology, mentoring and a strong dedicated staff that looks at potential more than liabilities.

Come Learn & Grow With Us!

Antonio Lee, Director of Information Technology

FINANCIAL SERVICES

Once we have helped people get a handle on basic check book and personal money management we will provide a forum for financial institutions to come and make presentations of financials services that can help provide long term financial stability for people that might not other wise have access this information.

BUSINESS NETWORKING

The Circles of Color group provides minority networking and referral opportunities that can help make the difference between struggling to grow and rapid, profitable and rewarding potential.

BUILDING WEALTH

We are working with financial services companies to provide workshops and seminars on building wealth. This is vital to the long term survival of our families and the future of our young people. Buying a car, having expensive jewelry does not always translate into building wealth. It is important to know the difference and we seek to help clarify this point for our community.

PURCHASING PROPERTY

Why pay rent when you can purchase a home of your own. We will be working with many Real Estate professionals to provide workshops and seminars to help individuals and families realize their part of the American dream, Home Ownership.

Technology For the Rest of Us

As an underlying theme, at its core the Technology Resource Center is about Technology. Once fully operational the center will include broadband access to the internet, Multi Media teleconferencing, Live Web Cast Origination and Reception, Voice Over IP communications, Web Hosting, Disaster Recovery solutions and Digital Identity Management with secure technology utilization tools. It is vital that we provide these resources if the people in our community are to compete effectively.

Conference Room and Training Space

CONFERENCE ROOM

With the demands of business to communicate without travel growing and the cost of going into New York City constantly rising a cost effective alternative is in order. We are offering a set of two fully functioning Multimedia conference rooms. Conference Room One is over 500 Sq ft. and Room Two is about 260 sq ft. both equipped with multimedia capabilities for both audio and video as well as Internet Interconnectivity.

TRAINING SPACE

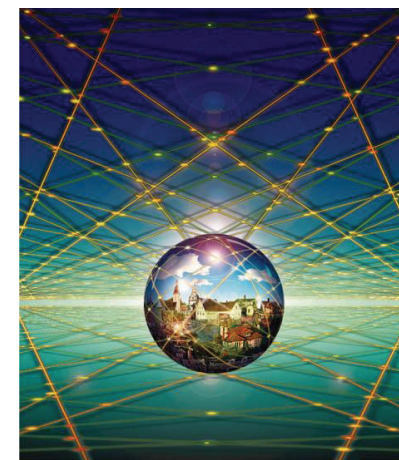

The need for knowledge and information is an ongoing process throughout our lives. We have built a center that will serve as an effective point of contact with technology that can assist in the pursuit of that knowledge and information. We have developed this catalog of courses, workshops and seminars that are directed at helping to provide access to this technology. We are also able to make these resources available on a rental Basis. We have created "**The Training Suite**"™ for custom training solutions.

Public Access

We have established a public area where access to the internet can be made available to individuals and small groups. We are offering access for a fee on an hourly basis or for the cost of an annual or multi year membership. We are also working to establish relationships with corporate sponsors to assist with individuals and organizations that can not afford the cost of access to the resources at the center.

Improving the Quality of life through Knowledge

KNOWLEDGE IS THE KEY TO YOUR FUTURE

One of the key reasons people have for not realizing their full potential is a lack of knowledge. In today's competitive world, technology is a part of every aspect of life. People that are familiar with technology and how to get the most out of using it are the people that can move ahead and improve their quality of life. We have created a place to help you get started. We will walk with you as you grow and develop.

INVEST IN YOURSELF

We spend money so casually everyday of our lives. If we stop and think about the amount of change that we spend every day we would find that we have more than enough money to invest in ourselves to gain the knowledge that could change our lives.

Pastor Class

In addition to helping pastors and church staff understand Microsoft software, from time to time, the Technology Resource Center will offer course specific to pastoral ministry. Many pastors have a wealth of software that they have spent hundreds even thousands of dollars purchasing, but they do not know how to use the software to its fullest potential. It is our goal to help you get the most out of your software. Keep your eyes open for intensive training on several of the key products of this type.

Seniors and Technology

You are never too old to learn. Classes will be offer for seniors on a daily bases on a variety of subjects from introduction to computers to understanding Microsoft Works. In addition to offering classes in a variety of subjects an opportunity for seniors to practice their skills will be given daily. It is also our hope for some cross generational learning experiences where seniors and our youth can spend time together learning from each other in our Learning in the Spirit environment.

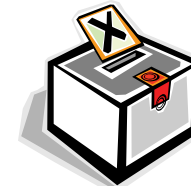

Youth Empowerment through Technology

The "digital divide" is getting wider and wider for many minorities and poor children in our community. Although many of our children are exposed to computers in their schools, they may not have an opportunity to use a computer at home. The Technology Resource Center would be open for students to do their homework and explore the wonders of the internet on a daily basis Monday through Friday for 3-6 PM. During that time, help will be given to students as they explore the wonders of the internet to research and communicate with each other. We will also be offering specific course specially designed for them. One of our primary goals is to help students become more knowledgeable about computers as we embark on the 21st Century.

KING OF KINGS WORKSHOP

From the mouth of people that have lived the life, hard edged, first hand knowledge and experience will serve to deter our youth from turning the wrong way. This project will be in collaboration with CF and will supplement a nation wide tour.

POWER & POLITICS HIP HOP STYLE

One person, One Vote has new meaning now and as our Hip Hop generation is getting older they are realizing that everyone needs to cast a vote if they want to have anything to say about what happens in their future.

YOU BETTER KNOW HIV/AIDS awareness workshops

will seek to educate our youth on the dangers of unsafe sex and what to do to avoid some of the risk that is out there.

STARTING

A BUSINESS

This series will seek to help young people that are interested in turning their ideas in to businesses and just need a helping hand, knowledge and information.

Lecture Series

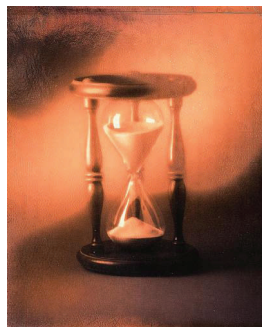

SPECIAL EVENTS

We are preparing to present original material in the form of lecture and presentation series covering a broad range of topics. We have two key projects that we are working on to start with. Much of the work for these projects will be handled in-house using the resources of the Technology Resource Center.

WALKING THROUGH HISTORY

With Dr. Leonard Jeffries

The Technology Resource Center is proud to announce a collaboration with the world renowned professor of Ancient African History to provide a complete presentation of the history that traces the origins of a people who's story has been distorted over time and in some cases lost all together. Dr. Jefferies will walk through history stopping along the way to clarify and highlight key points that have here to fore been misrepresented. This project represents a multi-layered effort to preserve the history of a people, while bringing our people along during the process. This series will be compiled, produced, edited and presented via digital media.

ENCOUNTERS IN BLACK TRADITIONS: NEW ENCOUNTERS

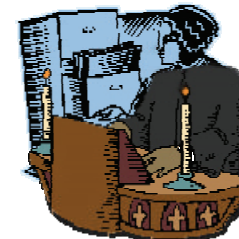

Twenty years ago this independently produced documentary provided a thirteen week series featuring a slice of life from the African American community. This new project seeks to update and provide new incite into the lives of this vital minority community. Once again this will be a thirteen week series and once again the focus is on the African American community, however, much has changed in our society and there many new issues and challenges for this population and this series will highlight key elements of the current struggles and the future trends that have shaped this proud group of people. We will be developing, compiling research materials, producing, editing and presenting via digital media this latest edition as well as releasing the original series on an enhanced digital media.

“SPECIALLY
FOR YOUR
CHURCH”

Price: \$500.00
Order #:0008-01
Type: Group Sessions

Come to the Technology Resource Center, and Let us Help You. . .

TECHNOLOGY & RUNNING GOD'S HOUSE

Have you ever wished that there was a place you could go for a few hours or a few days and get help specific to your needs as a pastor or church staff person? Well now, there is a place to go. As part of the Technology Resource Center we have built in a learning resource specifically for the busy pastor and church personnel at a reasonable cost. No longer do you and your staff have to waste valuable time, trying to figure out how to work with a specific software package, but you can attend a short training class at our facility and improve your knowledge and productivity.

These classes are focused on the daily operation of the local church. Instructors will focus on such issues as.

- Producing your Sunday bulletins
- Writing letters using mail merge
- Getting the most out of outlook
- Communicating to your members via email
- Understanding and using excel in your unknown word
- Using power point in you teaching ministries
- Creating a filing system that works using access

These are just a few of the things we can help you with in just a few hours in our technology center. Take a few hours and come to our Learning Center and you are sure to gain access to information that will make you and your staff more productive when it comes to utilizing your computers. Let us help you learn to use what you have. In addition to the course as described, the Technology Resource Center can also provide a centralized Information Technology base of operations to form a solid foundation for future growth.

PRODUCTIVITY SOFTWARE

We will specialize this course in working with software that can help to increase productivity.

TIME MANAGEMENT SOLUTIONS

This course uses project management software to demonstrate the benefits and techniques of time management and project planning.

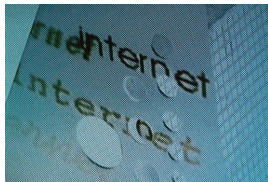

INTRODUCTION TO COMPUTERS

This course provides a basic history and over view of the computer industry and some discussion of current and future technologies.

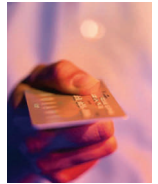

INTRODUCTION TO THE INTERNET

This course will introduce the basic concepts of the internet, the history and some of the most useful "best practices" all geared to help make your next internet experience better.

BANK & CHECKBOOK BASICS

Everyone needs so help working with and organizing the way they handle their finances. We are offering a course on basic finance. We will help you setup and maintain your finances.

HEALTH REFFERAL SERVICES

Families and individuals that may not have full access to health services can gain knowledge and information in our Health service seminars, with referrals and support services

MENTAL HEALTH REFFERAL

Families and individuals that may not have full access to health services can gain knowledge and information in our Mental Health service seminars, with referrals and support services

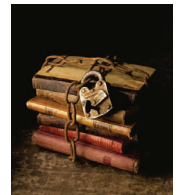

After School @ TRC

We are reaching out to the local school system to establish structured after school programs to increase the general exposure for our young people to technology resources. We are also working with local community based organizations as well as corporate sponsors to help off set the cost of developing and making this resource available.

EDUCATION SUPPORT SERVICES

Our workshops and seminars help better prepare individuals for a wide range of educational challenges. We are offering access to test preparation software via the internet for many of the major tests available in many fields of study and employment. We also offer a Seniors N Technology training program to help our seniors gain access to technology and the knowledge to use it. We are also preparing an after school program for our young people.

Family Based Resources

FAMILIES TOGETHER

The purpose of our center is to provide a central location from which we can provide access to a broad range of technology based resources. We are also interested in creating a place that families and friends as well as local small businesses can experience and share in the technology we provide. Our center will not only provide access to technology for businesses, community based organizations and individuals, but will also provide a place where access to information can be provided to everyone with the assistance of our "Outreach Center" which is a part of our Faith Over Fear Foundation initiative. We are working with community based organizations, churches, government agencies, local government, small businesses and major corporations to establish a central point of collaboration that can help people to use information more efficiently. Through the foundation we will establish IT POP stations where we will have someone to work with people to help them find the information that will be most useful to them. This suite of services will be funded through our pool of resources that will flow from the central point of collaboration that we have created. We look forward to helping people find the information that will help them to find their way to the solutions to their problems. The natural by product of this project will be, we hope, a center that will foster the development of a sense of community that has been missing our communities for too long now. What is good for our community is good for

business. This concept is vital to the foundation and with the efforts of our collaboration partners we will build a center that can help improve the quality of life

of people in our community. The technology we have developed here at the center will help to level the playing field for small businesses in our community as well. The ability to project technology into the community is also a part of our strategy and with our full service data center we can provide Information Technology Services to small businesses, community based organizations, churches, local educational institutions, local government and individuals. The key basic concept holds this center together. We are dedicated to the idea of technology for everyone. We welcome the input and support of members of our community and after our Grand Opening we are prepared to offer a broad range of courses, workshops, seminars and multimedia presentations. We will be able to provide access to web casting and originate web broadcasts as well.

*Join Us
as the Adventure Continues . . .*

INTRODUCTION TO MICROSOFT OFFICE

This course covers the entire Microsoft suite of software and gives a broad over view on some the uses of each component.

MS ACCESS

This course focuses on the database tool from MS Office and will cover the wide range of tasks that can be accomplished using it.

MS WORD

This course focuses on the word processing tool from MS Office and will cover the wide range of tasks that can be accomplished using it.

MS PUBLISHER

This course focuses on the desktop publishing tool from MS Office and will cover the wide range of tasks that can be accomplished using it.

MS EXCEL

This course focuses on the spreadsheet tool from MS Office and will cover the wide range of tasks that can be accomplished using it.

MS OUTLOOK

This course focuses on the desktop accessory tool from MS Office and will cover the wide range of tasks that can be accomplished using it.

MS POWERPOINT

This course focuses on the presentation tool from MS Office and will cover the wide range of tasks that can be accomplished

INTEGRATING MS OFFICE

This course focuses on the entire MS Office suite and will cover the wide range of tasks that can be accomplished using them together.

Community Based Resources

A SENSE OF COMMUNITY

The sense of community that was once so vital to the stability and growth of our communities has been lost with the advent of recent forms of technology. The Technology Resource Center was designed to provide a central place for people to come and enjoy technology as a community. Small businesses can find access to corporate style resources, however the sense a community adds the flavor and style that makes communities thrive.

*"We all need to work
together as a team."*

RESOURCES

FOR THE REST OF US

Although our primary focus is technology, we are also working to bring access to information that will be helpful in improving the quality of life for members of our community. We have established an organization that will interact with agencies and community based organizations here in our community to coordinate access to these resources sorely missing in our community. We are working with a number of groups, organizations and individuals that are providing services and we are working to be the conduit. We are establishing a formal working relationship with local government, the county and the state to make the best possible resources available.

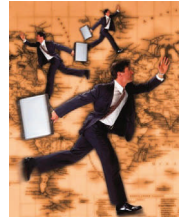

We have already reached out to a number of local organizations such as:

- Faith Over Fear Foundation
- Urban League of Bergen County
- Local Church Organizations
- Local Board of Education

For our purposes we are working with a number of small businesses in our community to grow the type of resources that we know are needed and can be very helpful to many people in our community as well as the small businesses and local community based organizations that may not be able to afford access to these resources otherwise.

TIME MANAGEMENT BASICS

Organizing our time is a skill that we all can use. This workshop will help with some basic techniques that will help you plan and use your time more wisely.

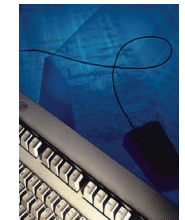

TIME MANAGEMENT ADVANCED

For the more advanced and person that is running a small business, raising a family and community activities make life very hectic. The advanced techniques in this course will help

INTEGRATING TECHNOLOGY

How can we best integrate technology into our lives. Internet access accounts, email accounts, voice mail accounts, text messaging, PDA's and cell phones all into a smooth running lifestyle.

PERSONAL TECHNOLOGY SECURITY

Ad ware, spy ware, viruses, and identity theft are all common problems plaguing today's user of technology. We will help you navigate the waters of options to protect yourself.

Seniors 'N' Technology – Senior Tech

We have created special series of classes specially designed to help our senior community to take advantage of technology to help them improve their quality of life. We are working with local government, county, state and federal agencies to facilitate this program. We are also reaching out to corporations to establish a pool of resources that can help to sponsor those people that can not afford access to this program.
